- 1 [High dynamic range imaging](#) 
Paul Debevec, Erik Reinhard, Greg Ward, Sumanta Pattanaik
August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**
Publisher: ACM Press
Full text available:  [pdf\(20.22 MB\)](#) Additional Information: [full citation](#), [abstract](#)

Current display devices can display only a limited range of contrast and colors, which is one of the main reasons that most image acquisition, processing, and display techniques use no more than eight bits per color channel. This course outlines recent advances in high-dynamic-range imaging, from capture to display, that remove this restriction, thereby enabling images to represent the color gamut and dynamic range of the original scene rather than the limited subspace imposed by current monitor ...

- 2 [Accurate color reproduction for computer graphics applications](#) 
Bruce J. Lindbloom
July 1989 **ACM SIGGRAPH Computer Graphics , Proceedings of the 16th annual conference on Computer graphics and interactive techniques SIGGRAPH '89**, Volume 23 Issue 3
Publisher: ACM Press
Full text available:  [pdf\(5.84 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A method is presented for accurate color reproduction among a wide variety of display devices. The method is very general, in that it may be applied to virtually any color display device. Its generality has been demonstrated by application to color monitors, film recorders, electronic pre-press systems and color hardcopy devices. The algorithm has been used to accurately translate between device dependent and device independent color specifications and to translate from one device dependent colo ...

- 3 [Achieving color uniformity across multi-projector displays](#) 
Aditi Majumder, Zhu He, Herman Towles, Greg Welch
October 2000 **Proceedings of the conference on Visualization '00 VIS '00**

6 Color gamut matching for tiled display walls

◆ Grant Wallace, Han Chen, Kai Li
May 2003 **Proceedings of the workshop on Virtual environments 2003 EGVE '03**

Publisher: ACM Press

Full text available:  pdf(678.72 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper presents a non-parametric full-gamut color matching algorithm. Color matching is important for the seamless appearance of tiled displays. In particular we address the case where the tiled display is composed of different types of projectors or DLP projectors with white enhancement. White enhancement produces a non-additive color space that is difficult to model. We perform our calibration using an inexpensive colorimeter as opposed to a highly accurate spectroradiometer. Our results s ...

7 A perceptual framework for contrast processing of high dynamic range images

◆ Rafal Mantiuk, Karol Myszkowski, Hans-Peter Seidel
July 2006 **ACM Transactions on Applied Perception (TAP)**, Volume 3 Issue 3

Publisher: ACM Press

Full text available:  pdf(723.38 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Image processing often involves an image transformation into a domain that is better correlated with visual perception, such as the wavelet domain, image pyramids, multiscale-contrast representations, contrast in retinex algorithms, and chroma, lightness, and colorfulness predictors in color-appearance models. Many of these transformations are not ideally suited for image processing that significantly modifies an image. For example, the modification of a single band in a multiscale model leads t ...

Jacob Munkberg, Petrik Clarberg, Jon Hasselgren, Tomas Akenine-Möller
July 2006 **ACM Transactions on Graphics (TOG) , ACM SIGGRAPH 2006 Papers SIGGRAPH '06**, Volume 25 Issue 3
Publisher: ACM Press
Full text available:  pdf(5.07 MB)  Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#) mov(17:57 MIN)

In this paper, we break new ground by presenting algorithms for fixed-rate compression of high dynamic range textures at low bit rates. First, the S3TC low dynamic range texture compression scheme is extended in order to enable compression of HDR data. Second, we introduce a novel robust algorithm that offers superior image quality. Our algorithm can be efficiently implemented in hardware, and supports textures with a dynamic range of over 10⁹:1. At a fixed rate of 8 bits per pixel, w ...

- 10 **The versatility of color mapping** 
Samuel P. Uselton, Mark E. Lee, Randy A. Brown
October 1986 **Proceedings of the 1986 workshop on Applied computing SAC '86**

Publisher: ACM Press
Full text available:  pdf(412.49 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Extracting information from large amounts of data by using tables of numbers is difficult. Often, such data can be presented more effectively with graphics. The reduction in the cost of memory has allowed more powerful display systems to provide for the simultaneous display of hundreds, thousands, and even millions of colors. Effective and efficient manipulation of the colors in the display system is necessary to manage the use of such a large number of colors. These extended color capabili ...

1 [Color science and color appearance models for CG, HDTV, and D-CINEMA](#)

Charles Poynton, Garrett Johnson
 August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

Publisher: ACM Press

Full text available: [pdf\(1.46 MB\)](#) Additional Information: [full citation](#), [abstract](#)

This course introduces the science behind image digitization, tone reproduction, and color reproduction in computer generated imagery (CGI), HDTV, and digital cinema (D-cinema). We detail how color is represented and processed as images are transferred between these domains. We detail the different forms of nonlinear coding ("gamma") used in CGI, HDTV, and D-cinema. We explain why one system's *RGB* does not necessarily match the *RGB* of another system. We explain color specification ...

4 The SAGE graphics architecture

Michael Deering, David Naegle

 July 2002 **ACM Transactions on Graphics (TOG) , Proceedings of the 29th annual conference on Computer graphics and interactive techniques SIGGRAPH '02**, Volume 21 Issue 3

Publisher: ACM Press

Full text available:  pdf(17.26 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The Scalable, Advanced Graphics Environment (SAGE) is a new high-end, multi-chip rendering architecture. Each single SAGE board can render in excess of 80 million fully lit, textured, anti-aliased triangles per second. SAGE brings high quality antialiasing filters to video rate hardware for the first time. To achieve this, the concept of a frame buffer is replaced by a fully double-buffered sample buffer of between 1 and 16 non-uniformly placed samples per final output pixel. The video output ra ...
